—

When you think about it, we're killing ourselves for the convenience of microwaves, cell phones, wireless (laptops in your hotel room.....) and the dangerous 'smart' meters being attached to people's homes and businesses that do not save energy. In fact, like the aerosol spraying of our skies, this is another massive human and environmental disaster.

If you haven't read all the research, there is hundreds of pages of it at the bottom of this column (links):

[http://www.devv.com/new\\_site/smart-meter-081511.html](http://www.devv.com/new_site/smart-meter-081511.html)

All from individuals who have spent decades studying EMF radiation and the massive 'dirty energy' now covering us all. Here is another one I found and I ask: Where the hell are the state legislators? Do they not know the danger to their body, their family members, pets, livestock and important species like bees?

A few do here in Texas and are doing nothing. The excuse is our legislature is out of session. They can call an emergency session at any time, but this involves literally a few trillion dollars for utility companies, the holding companies that own them, companies that make the meters, sensors, etc. Only a massive outcry by the people of Texas will move them to defy the big money.

Overloading of Towns and Cities with Radio Transmitters (Cellular Transmitter): a hazard for the human health and a disturbance of eco-ethics

By: Karl Hecht, Elena N. Savoley

IRCHET International Research Centre of Healthy and Ecological Technology

Berlin - German

I also highly recommend this book. Dr. Samuel Milham is one of the expert witnesses who will be testifying at my hearing in front of the Texas PUC. Wonder why there are cancer clusters - how about the one in southern California at a school? I've read literally hundreds of hours about this 'dirty energy' disaster. Dr. Milham is the scientist who first alerted the world about the link between occupational exposure to electromagnetic field and human disease.

In the link above on my site, one of the expert opinions is by a professor at Hebrew University in Israel. He states what so many other experts also agree on: All this could have been avoided by using fiber optics which have no known adverse health effects, but it's very expensive. The utility and communications companies took the cheap way and now it's a killer.

Dirty Electricity: Electrification and The Diseases of Civilization by Dr. Samuel Milham (less than 100 pages)
