Subject: How Junk Science & Mental Disorders Are Connected

<http://www.youtube.com/watch?v=nzdu3WQylZg>

Psychiatrists, Physicians & Psychologists on the lack of medical/scientific test to verify mental disorders as a “disease” or medical condition

“...modern psychiatry has yet to convincingly prove the genetic/biologic cause of any single mental illness...Patients [have] been diagnosed with ‘chemical imbalances’ despite the fact that no test exists to support such a claim, and...there is no real conception of what a correct chemical balance would look like.”

— *Dr. David Kaiser, psychiatrist*

“There’s no biological imbalance. When people come to me and they say, ‘I have a biochemical imbalance,’ I say, ‘Show me your lab tests.’ There are no lab tests. So what’s the biochemical imbalance?”

— *Dr. Ron Leifer, psychiatrist*

“DSM-IV is the fabrication upon which psychiatry seeks acceptance by medicine in general. Insiders know it is more a political than scientific document... DSM-IV has become a bible and a money making bestseller—its major failings notwithstanding.”

— *Loren Mosher, M.D., Clinical Professor of Psychiatry*

“All psychiatrists have in common that when they are caught on camera or on microphone, they cower and admit that there are no such things as chemical imbalances/diseases, or examinations or tests for them. What they do in practice, lying in every instance, abrogating [revoking] the informed consent right of every patient and poisoning them in the name of ‘treatment’ is nothing short of criminal.”

— *Dr Fred Baughman Jr., Pediatric Neurologist*

9/29/2010

“Psychiatry makes unproven claims that depression, bipolar illness, anxiety, alcoholism and a host of other disorders are in fact primarily biologic and probably genetic in origin... This kind of faith in science and progress is staggering, not to mention naïve and perhaps delusional.”

— *Dr. David Kaiser, psychiatrist*

“In short, the whole business of creating psychiatric categories of ‘disease,’ formalizing them with consensus, and subsequently ascribing diagnostic codes to them, which in turn leads to their use for insurance billing, is nothing but an extended racket furnishing psychiatry a pseudo-scientific aura. The perpetrators are, of course, feeding at the public trough.”

— *Dr. Thomas Dorman, internist and member of the Royal College of Physicians of the UK*

“I believe, until the public and psychiatry itself see that DSM labels are not only useless as medical ‘diagnoses’ but also have the potential to do great harm—particularly when they are used as means to deny individual freedoms, or as weapons by psychiatrists acting as hired guns for the legal system.”

— *Dr. Sydney Walker III, psychiatrist*

“The way things get into the DSM is not based on blood test or brain scan or physical findings. It’s based on descriptions of behavior. And that’s what the whole psychiatry system is.”

— *Dr. Colin Ross, psychiatrist*

“No biochemical, neurological, or genetic markers have been found for Attention Deficit Disorder, Oppositional Defiant Disorder, Depression, Schizophrenia, anxiety, compulsive alcohol and drug abuse, overeating, gambling or any other so-called mental illness, disease, or disorder.”

— *Bruce Levine, Ph.D., psychologist and author of Commonsense Rebellion*

“Unlike medical diagnoses that convey a probable cause, appropriate treatment and likely prognosis, the disorders listed in DSM-IV [and ICD-10] are terms arrived at through peer consensus.”

— *Tana Dineen Ph.D., Canadian psychologist*
