[Chemtrails and Monsanto's New Aluminum Resistance Gene – Coincidence?](#)

By Barbara H. Peterson

Why did Monsanto Develop an Aluminum Resistance Gene?

Monsanto is currently marketing an aluminum resistance gene. Here's the spin, folks:

Small-scale, resource-poor farmers in developing countries face daily stresses, including poor soils, drought, and lack of inputs. Ongoing trends such as climate change and population growth will likely exacerbate binding stresses. A new generation of genetically engineered (GE) crop research aims to alleviate these pressures through the improvement of subsistence crops—such as cassava, sorghum, and millet—that incorporate traits such as tolerance to drought, water, and aluminum in soils as well as plants with more efficient nitrogen and phosphorus use. (<http://www.ifpri.org/publication/delivering-genetically-engineered-crops-poor-farmers>)

Now, let's take a look at journalist Michael Murphy's research into chemtrails, geo-engineering, and the fact that extremely high levels of aluminum and barium are found in water, snow and soil, in areas shown to have heavy chemtrail patterns (three-part video):

Coincidence that Monsanto will “come to the rescue” with aluminum resistance genes because normal plants die off in the presence of excess aluminum? Or opportunistic capitalism and planned corporate food monopoly courtesy of Monsanto and the Hegelian Dialectic based on insider information that a proposed “geo-engineering” scheme is already in place that is filling our atmosphere with chemtrails containing aluminum and barium?

This is no game folks. We are being hit from all sides with a planned, homicidal, genocidal agenda to make a very few families even richer than they already are, and reduce the world’s population to 500 million as set forth in the Georgia Guidestones. This is nothing short of biological warfare.

When are we going to hit the streets with this information? Donning gas masks and anti-monsanto t-shirts, walk up and down a 3 block heavily trafficked area and when people stop us to ask what's going on, give them pamphlets and information. People need to know these things and most don't or are to ignorant to research what's going on. Same with the crooks of BP. These corporate, greedy monsters are destroying our environment all in the name of the almighty dollar.

I have no doubts about the AL and BA in the chemtrails and I have no doubts about Monsanto's perfidy in our lives, however Rainforest soils are notorious for aluminum minerals. I even remember this in college. Here is some quick info.

http://www.ehow.com/facts_5841433_leaching-rainforest-soils.html

Thanks, Todd. Here is some more good information about aluminum in soil:

Soil Acidity and Liming (<http://www.soil.ncsu.edu/about/century/soilacidity.html>)

This can be easily handled by natural means, and is not a widespread problem, which requires the creation of an Aluminum-resistant, genetically modified seed. Here's a snip of the article:

"Mineral soils with variable charge mineralogy are 100 percent base saturated at pH 5.8 to 6. However, organic soils above pH 5 were found to have very little aluminum in the soil solution and essentially have their active exchange sites essentially occupied by basic cations. Organic matter holds Al quite strongly and liming organic soils to pH 5 reduces Al in the soil solution to very low concentrations. At pH 5 organic soils contain adequate Ca to overcome the H ion effect on cation uptake."

[...] Monsanto is genetically engineering crops to resist the toxic effects of aluminum – to increase c...But wait! Aluminum levels in soil and water have never been a problem until the last few years when they started spraying it into the atmosphere supposedly to reduce global warming – which isn't happening. So why do they continue? If enough aluminum can be dumped on the planet to stunt traditional crops, farmers will have to buy genetically engineered seeds from Monsanto. Hmmm.] Farm Wars 2010 May 18 (Cached) Bill Gates' foundation is funding research in reversible sterilization for men via ultrasound treatments and a male contraceptive pill.
